Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editor

Dear Colleagues,

Rabies spreads to humans and animals through the bites and scratches of infected animals. Domestic dogs are the predominant source of rabies virus in developing countries, while wild animals are the primary carriers of rabies in developed countries.

Despite being fully preventable, dog-mediated human rabies kills tens of thousands of people every year, especially in rural and impoverished areas in Africa and Asia. This Special Issue provides readers with knowledge about the biology and epidemiology of this neglected zoonotic disease. We welcome submissions of research articles, review articles and short communications related to rabies viral infection and prevention, epidemiology, pathogenesis, immunology and the resistance of the virus.

Message from the Editor-in-Chief

"Microorganism" merges the idea of the very small with the idea of the evolving reproducing organism is a unifying principle for the discipline of microbiology. Our journal recognizes the broadly diverse yet connected nature of microorganisms and provides an advanced publishing forum for original articles from scientists involved in high-quality basic and applied research on any prokaryotic or eukaryotic microorganism, and for research on the ecology, genomics and evolution of microbial communities as well as that exploring cultured microorganisms in the laboratory.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, AGRIS, and other databases.

Journal Rank: JCR - Q2 (*Microbiology*) / CiteScore - Q2 (*Microbiology*)
